

AMBULANCE TRACKER

EMERGENCY RESPONSE COORDINATION SYSTEM

Every second counts.

We built the bridge between panic and help.

15-20

MIN AVG RESPONSE

7%

SURVIVAL DROP / MIN

0%

CURRENT COORDINATION

THE PROBLEM

Why current systems fail

15–20 min

Average ambulance
response time in Indian cities

7%

Survival rate drops
per minute of delay

0%

Coordination between
ambulances, hospitals & citizens

“People die because nobody clears the path.”

OUR SOLUTION

Uber-like coordination for emergency response

PATIENT

- One-tap emergency booking
- Live ambulance tracking
- Real-time ETA

DRIVER

- Optimized route to patient
- Then to nearest hospital
- Traffic-aware navigation

CITIZEN

- Lane-clearing alerts
- 500m radius notification
- “Clear left lane” warning

KEY FEATURES

What makes us different

GPS Auto-Location

No address typing during panic. Instant location detection.

8 Emergency Types

Cardiac, Accident, Breathing, Bleeding, Pregnancy, Stroke, Burns, Other.

Live Map Tracking

Real-time ambulance movement with ETA countdown.

Smart Routing

Optimized route: Patient → Nearest Hospital with traffic awareness.

Citizen Alerts

500m radius: "Ambulance approaching, clear left lane."

Hospital Network

5 major Delhi hospitals: AIIMS, Safdarjung, Max, Fortis, Apollo.

TECH STACK

Built with modern, scalable technologies

Frontend Framework	Next.js 14	App Router, SSR, API routes
Language	TypeScript	Type-safe, scalable code
Styling	Tailwind CSS	Utility-first, responsive design
Maps	Leaflet + OpenStreetMap	Free, no API key needed
Animation	Framer Motion	Smooth, professional transitions
Icons	Lucide React	Clean, consistent iconography
Deploy	Vercel	One-click deploy, global CDN

LIVE DEMO

See it in action

1

Patient opens app

GPS auto-locates. One-tap emergency booking.

2

Ambulance dispatched

Nearest ALS unit assigned. Live ETA countdown.

3

Driver navigation

Optimized route: Hospital → Patient → Nearest Hospital.

4

Citizen alerts

500m radius notification: “Clear the left lane.”

IMPACT & FUTURE

Where we go from here

IMPACT

- ✓ Reduce ambulance response time from 15-20 min to under 8 min
- ✓ Save lives through coordinated lane clearing
- ✓ Empower citizens to be part of the emergency response
- ✓ Zero-cost deployment using open-source maps

FUTURE SCOPE

- Real-time backend with WebSocket connections
- IoT integration for live ambulance telemetry
- AI route optimization using traffic prediction
- Native mobile apps (React Native)
- Government API integration for official data

THANK YOU

“In an emergency, every second counts.”

We built the bridge between panic and help.
